

GRIP TILE

PATENTED TECHNOLOGY

SLIP RESISTANCE TECHNOLOGY

GripTile is a **patented production technology** that **combines the unique features of high slip resistance with a soft surface touch.**

The slip resistance is integrated into the tile, so the **properties do not wear off** and the tiles are **easy to clean.**

GripTile combines high slip resistance with **beautiful design possibilities to be used indoor and outdoor.**

COMMERCIAL SPACES

GripTile technology is a perfect, wear-resistance solution for commercial spaces such as offices, airports, garages, spas, hotels and restaurants.

- Prevents slipping accidents, which are the most common cause of injury at work
- Eliminates special footwear
- Decreases injury or damage claims

Even in these high-traffic spaces the properties will not wear off.

BEAUTIFUL LOOK AND FEEL

The use of the new technology does not modify the textures and colours. The tiles remain soft to the touch.

SAFER SURFACES

- Integrated slip resistance, creating a safer and more reliable surface for walking
- Naturally safe: free of toxic chemicals

RESIDENTIAL SPACES

Create safer living spaces with integrated slip resistance.

- For indoor areas such as bathrooms, garage, kitchens
- For outdoor areas such as pools and patios

GripTile makes life comfortable and safe even in these high-traffic spaces.

CLEANER SURFACES

Tiles with GripTile are **easy to clean**. As the surface remains smooth and soft to the touch, dirt, oil, shampoo, soap,... are easily cleaned off.

EXCEEDS ALL STANDARDS

Tiles with the GripTile technology have **superior traction on wet surfaces**, even in shower floors. During slip resistance tests, the tiles exceed the standards of different tests: dynamic coefficient of friction (DCOF), DIN 51130, DIN 51097, pendulum, and BCR. In all these tests, **GripTile scores well above the standard**.

INTEGRATED IN PRODUCTION

GripTile represents an **intrinsic characteristic** of the product that remains unchanged over time.

Slip resistant particles are integrated into the glaze, so this technology can be **easily integrated into existing production processes** and offers a **better option** than currently known technologies.

WHY CHOOSE GRIPTILE?

SUPERIOR SLIP RESISTANCE

SOFT TOUCH

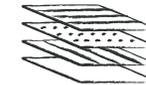

EASY TO CLEAN

INDOOR & OUTDOOR

PATENTED SOLUTION

ENDLESS DESIGN FLEXIBILITY

GREAT TECHNICAL PERFORMANCE

FREE OF TOXIC CHEMICALS

HIGH DURABILITY
EVEN IN HIGH-TRAFFIC PLACES
