

**SQUARE  
CLIC**   
PATENTED TECHNOLOGY

TECHNOLOGY FOR  
ALIGNED SQUARE TILE  
INSTALLATIONS

The flooring industry has been looking for a solution to make checkerboard pattern installations possible. The production of square tiles with a locking systems has always been a challenge.

Unilin Technologies solves this problem with SquareClic, a technology which uses Diamond inserts during installation, ensuring a **perfectly aligned floor throughout the whole installation.**

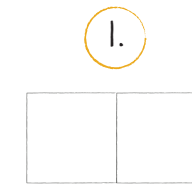

ALIGNMENT WITH DIAMOND INSERTS

## ADVANTAGES OF SQUARECLIC

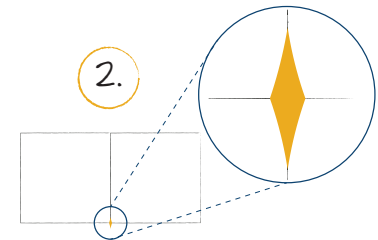

Due to standard production tolerances, square floorboards almost always show deviations in their format, making it almost impossible to install a floor with **square tiles that are fully aligned** in a checkerboard pattern.

SquareClic technology ensures that each intersection of four installed square panels stays **perfectly positioned and aligned** during installation. Thanks to the ingenious Diamond inserts, deviations of the floorboard format itself are countered by keeping the square tiles in a straight position throughout the installation.

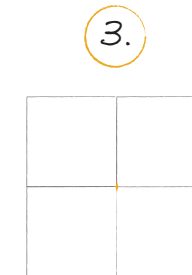

## SQUARE TILE LOCKING SYSTEM WITH DIAMOND INSERTS

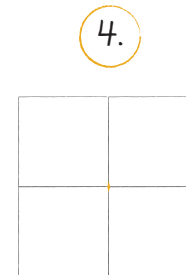

INSTALL TWO PANELS  
with Uniclic angle-angle

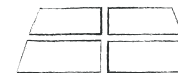

INSERT THE DIAMOND INSERT  
into the panels

INSTALL THE THIRD PANEL  
by angling and sliding

INSTALL THE FOURTH PANEL  
by angling and sliding

PERFECTLY ALIGNED

INSTALLATION OF SQUARE TILES  
AND CHECKERBOARD POSSIBLE
